Our windows have Siegenia TITAN AF fittings. Even if it is standard version, they guarantee a high level of safety. Additional anti-burglary protection is provided - in combination with a rotary mushroom head cam - by a special burglary resistant hitch, enables raising the window safety class to the appropriate level.

SIEGENIA
brings spaces to life

Rotary mushroom head cam with integrated height adjustment

Though compact, it combines plentiful of advantages: it ensures simpler and perfectly precise installation; self-reliantly equals fitting play tolerances and significantly limits the need to perform adjustment during production, installation and handling; automatically adjusts to changing operating conditions, e.g. temperature; ensures always the optimally set closing system; prevents from time wasting and costly complaints.

Stay system

It enables closing and tilting of balcony windows and doors in an even simpler and more comfortable way: the large closing range on the air latch also allows for smooth, though effortless closing of very wide delicate sashes; positioning in the tilted position by means of a braking bushing; integrated anti-slam protection in the tilted position; lock in the tilted position preventing from incorrect window handling.

Anti-pry latch

Perfect mix of plastic and steel materials, ensuring the so far unreachable low friction level; no-nonsense extension to RC2 thanks to very simple templates / software and identical catch positions also in case of movable posts and higher security levels; attractive design of standard and anti-pry catches.

Balcony latch

During closing of a door a leaf is pulled by means of a latch, resulting in keeping a leaf in the latched position: in the standard version you can adjust the wedging force and friction level is low; in the comfort version door can be unblocked in the tilted position; a frame catch works together with a latch, resulting in no need to use any additional elements.

Corner

The corner with a finger leaf lift and lock of incorrect handle use. Rollers available even at the basic anti-burglary protection level, elegant design of fitting thanks to use of catches in the unified form.

Covered hinge side (optional)

Covered hinges ensure subtle window appearance and seamless sealing ensures perfect thermal and acoustic insulation. Several adjustment options allow to maintain easy sash operation for a long time, while the lower hinge is protected against staining by means of a correctly selected shield.
